DETAILED ACTION***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1,3,17,18 rejected under 35 U.S.C. 102(b) as being anticipated by Purbrick et al.,EP 29358, cited on applicant's IDS.

Purbrick teaches a photorsensitive composition comprising a polymer (1), a photoinitiator (3) and an ethylenically unsaturated monomer (4) (claims 1 and 2). The photoinitiator comprises a tribromomethane derivative which meets the limitation of formula (1-b) in applicant's claim 1. The compounds are shown below. The composition may also contain a mettalocene along with the tribromomethane derivative. The composition is used to form a lithographic printing plate (see claim 18).

***Allowable Subject Matter***

3. Claims 4,6,7-16,19,20 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Art Unit: 1752

The following is a statement of reasons for the indication of allowable subject matter: The prior art of record fails to disclose or suggest a photosensitive composition comprising an ethylenically unsaturated monomer, a photopolymerization initiator composition and a polymer binder, wherein the photopolymerization initiator composition contains a compound represented by the following formulas (2-1) or (2-3) or a lithographic printing plate comprising the photosensitive composition.
